## **DETAILED ACTION**

### ***Drawings***

The drawings were received on 7 May 2009. These drawings are accepted.

### ***Response to Arguments***

In response to Applicant's arguments regarding the claimed "information recording medium," the Examiner makes note of Applicant's admission that it comprises "only statutory subject matter of the likes of physical recording media, such as an optical disc, semiconductor memory, etc.," and that it "is not meant to incorporate non-statutory subject matter such as an electrical signal alone." Therefore, the Examiner interprets the claimed "information recording medium" to comprise only statutory subject matter and withdraws the rejection under 35 U.S.C. 101.

### ***Allowable Subject Matter***

**Claims 1-29** are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant's independent **claim 1** is drawn toward a recording and reproduction apparatus, comprising: a reading section for reading first data including video and audio data, and second data including video and audio data, from an information recording medium; a first buffer section for temporarily accumulating the read first data; a second buffer section for temporarily accumulating the read second data; a first decoding

section for outputting first decoded data including video and audio data generated by decoding the accumulated first data; a second decoding section for outputting second decoded data including video and audio data generated by decoding the accumulated second data; a first setting section for setting a read finish point of the first data; a second setting section for setting a read start point of the second data; and a control section for calculating a first time period, from a start point of a seek operation of the reading section from the read finish point to the read start point until the first decoding section completes output of the first decoded data, and a second time period, from the start point of the seek operation until the second decoded data is allowed to be output by the second decoding section and comparing a length of the calculated first time period and a length of the calculated second time period.

Applicant's **claim 1** comprises a particular combination that is neither taught nor suggested by the prior art. The closest prior art of record, Okada et al (US Patent 6,263,150), differs from the claimed invention by not teaching or fairly suggesting a control section for calculating a first time period, from a start point of a seek operation of the reading section from the read finish point to the read start point until the first decoding section completes output of the first decoded data, and a second time period, from the start point of the seek operation until the second decoded data is allowed to be output by the second decoding section and comparing a length of the calculated first time period and a length of the calculated second time period.

The examiner maintains that independent claims **20, 23, 25-26, and 29** contain the same limitation, and are therefore found allowable for the explanation set forth in claim 1 above.

Applicant's independent **claim 24** is drawn toward an information recording medium having first data and second data recorded thereon to be reproduced by a reproduction apparatus, the reproduction apparatus including a reading section for reading the first data and the second data from the information recording medium a first buffer section for temporarily accumulating the read first data; a second buffer section for temporarily accumulating the read second data; a first decoding section for outputting first decoded data generated by decoding the accumulated first data; and a second decoding section for outputting second decoded data generated by decoding the accumulated second data; wherein a read finish point is set for the first data, a read start point is set for the second data, the first data and the second data are arranged such that a length of the first time period, from a start point of a seek operation of the reading section from the read finish point to the read start point until the first decoding section completes output of the first decoded data, is greater than or equal to a length of second time period from the start point of the seek operation until the second decoded data is allowed to be output by the second decoding section.

Applicant's **claim 24** comprises a particular combination that is neither taught nor suggested by the prior art. The closest prior art of record, Okada et al (US Patent 6,263,150), differs from the claimed invention by not teaching or fairly suggesting the first data and the second data are arranged such that a length of the first time period,

from a start point of a seek operation of the reading section from the read finish point to the read start point until the first decoding section completes output of the first decoded data, is greater than or equal to a length of second time period from the start point of the seek operation until the second decoded data is allowed to be output by the second decoding section.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
